

You probably have seen people selling alarm clocks on the street...

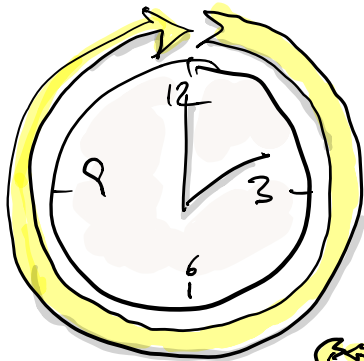

← At least until the 90's this was a common street scene in Seoul.

The fact is that everyone carries a clock.

.. and almost all cells in the body also carry their clocks.

But what is a clock?

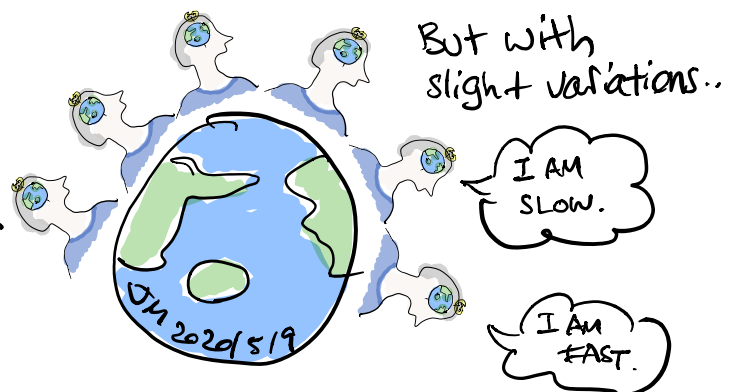

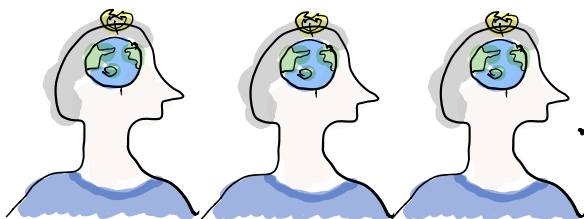

It is a small autonomous cycle that runs around exactly 24 hrs.

This is the definition of Earth's rotation time.

This means, remarkably, **EVERYONE HAS THEIR OWN COPY OF THE EARTH.**

Isn't this **AMAZING**? This is what you can study.
